

Incident Report: **NameError in IncidentViewSet**

Description: An error occurred in the IncidentViewSet class due to a typo in the class definition. This prevented the application from starting, impacting the API functionality.

Root Cause: The class IncidentViewSet was incorrectly defined with 'odelViewSet' instead of 'ModelViewSet', leading to a NameError when the application attempted to load the URL configuration.

Affected Systems:

- postmortem-pilot-api
- Django URL resolver

Severity: HIGH

Timeline:

1. Application started and attempted to load URL configurations.
2. The error occurred in incidents/views.py due to a typo.
3. Application failed to start, impacting API availability.
4. Developers identified the issue from the stack trace.
5. Fix was implemented and tested.

Suggested Fixes:

- Correct the typo in incidents/views.py from 'odelViewSet' to 'ModelViewSet'.
- Restart the application to apply changes.
- Monitor the application for any further issues.

Prevention:

- Implement code reviews to catch typos before merging.
- Use linters to identify potential issues in the code.
- Enhance unit tests to cover critical components.
